

# KEEPING YOUR CAT COOL IN THE HEAT

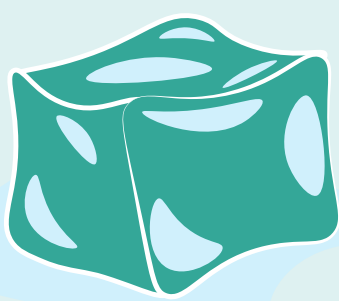

Let's cool them down!

1

## HOMEMADE ICE TREATS

Make up some ice treats for your cat with some of their favourite treats. Freeze some tuna juice or some low-salt chicken stock for an icy snack that will keep them entertained and cool.

2

## ADD ICE CUBES TO THE WATER DISH

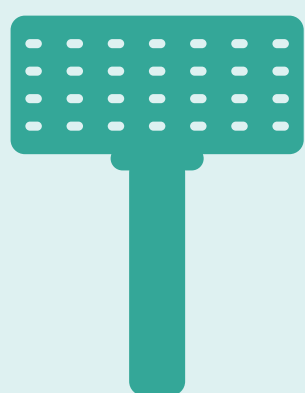

It helps keep the water cold and gives them something to bat around and play with!

3

## COOL DOWN THEIR BED

There are a wide range of cooling mats for pets available to buy, but placing freezer pack, or even a pack of frozen vegetables, well wrapped in a blanket in your cat's favourite spot will have a similar effect.

4

## KEEP ON TOP OF GROOMING

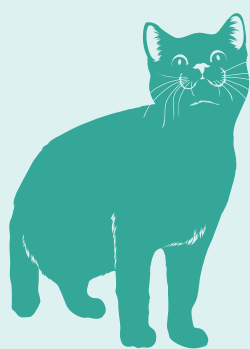

Excess fur on cats traps heat, so grooming during heatwaves will make your cat feel a little more comfortable. You may notice that your cat is grooming itself more than normal, too. This is nothing to worry about - it's their very own way to beat the heat as when the saliva evaporates off the fur, it will cool them down.

5

## KEEP THINGS AS COOL AS YOU CAN

Make sure to keep the AC on or fans circulating air to keep things as cool as you can! Never leave a cat closed in a room without it

6

## REMEMBER!

Watch your pet for signs of over-heating, including heavy panting and loss of energy. If you recognise these signs, encourage your cat to have a drink.
